

Windows

How to install my new master0.lic file after I bought more Render Nodes

Installation

1. Find your working copy of master0.lic. By default this is found at "C:\Program Files\Hash Inc\v###.#" or if you installed a 32bit version on a 64bit windows operating system the default path will be "C:\Program Files (x86)\Hash Inc\v###.#" if you did not install to the default path this file is stored in the same folder as master.exe or master_64.exe
2. it's best to rename your working master0.lic to something like master0.bak. This way the software will not read it. You can also copy the file out of the folder to another folder that does not hold **master.exe** or **master_64.exe**
3. Now find the **master0.lic** file you downloaded after your order if you have not already done that you can follow the steps at www.hash.com/faq. Copy the new **master0.lic** to your **Animation Master** Installation Folder
4. Now run the software like normal and enjoy your new **Animation Master** Render power

If you need help setting up netrender please check out:

- NetRender Setup Windows
- NetRender Setup Intel Mac
